

Explore: Parallax Effect

A modern trend in web design is the parallax effect. The parallax effect involves moving the background and foreground of objects on a website at different speeds. This creates the illusion of objects moving in a 3D space as users scroll. The parallax effect is popular since it is an impressive interactive feature for users.

Before you learn how to use the parallax effect in a variety of ways on your website, you will first study professional sites that use the effect. The examples below have you exploring sites that use the parallax effect. While some sites use it for simple movement over an image or section, others take the principles used to create the effect to a whole new level, creating an impressive faux 3D environment on their site.

Directions: Visit the professional sites below and respond to the prompts. Pay attention to the user experience, noting how the site creates the illusion of depth in a flat space.

Site 1: [Fluttuo](#)

- Describe how the parallax effect is being used. Which objects appear to be moving in a 3D space? Remember, this can be backgrounds, whole sections, or other widgets that are creating the illusion of depth on a page.

- How does the use of the parallax effect enhance the user experience?

- As a site visitor, what stands out the most to you in the site design?

Site 2: [On Corps AI](#)

- Describe how the parallax effect is being used. Which objects appear to be moving in a 3D space? Remember, this can be backgrounds, whole sections, or other widgets that are creating the illusion of depth on a page.
- How does the use of the parallax effect enhance the user experience?
- As a site visitor, what stands out the most to you in the site design?

Site 3: [Fueled](#)

- Describe how the parallax effect is being used. Which objects appear to be moving in a 3D space? Remember, this can be backgrounds, whole sections, or other widgets that are creating the illusion of depth on a page.
- How does the use of the parallax effect enhance the user experience?
- As a site visitor, what stands out the most to you in the site design?

Site 4: [Cyclemon](#)

- Describe how the parallax effect is being used. Which objects appear to be moving in a 3D space? Remember, this can be backgrounds, whole sections, or other widgets that are creating the illusion of depth on a page.
- How does the use of the parallax effect enhance the user experience?
- As a site visitor, what stands out the most to you in the site design?

Site 5: [NASA Prospect](#)

- Describe how the parallax effect is being used. Which objects appear to be moving in a 3D space? Remember, this can be backgrounds, whole sections, or other widgets that are creating the illusion of depth on a page.
- How does the use of the parallax effect enhance the user experience?
- As a site visitor, what stands out the most to you in the site design?
